LEGAL / ID: [Legal Name: {{LEGAL NAME}}] [Nationality: {{NATIONALITY/WORK AUTH}}] [DOB: {{DD/MM/YYYY}}]

PROFESSIONAL SUMMARY

Motivated Computer Science student with practical experience building high-performance cross-platform software and responsive web applications. Proficient in C++, Java, and Python, with hands-on expertise building dynamic frontends in React and scalable client architectures in Flutter/Dart. Strong foundation in data structures, algorithms, OOP, and automated testing, with a proven track record of shipping open-source software and maintaining clean codebases.

EDUCATION

{{YOUR UNIVERSITY / COLLEGE NAME}} {{City, Country}} * Expected {{Month, Year}}

Bachelor of Science in Computer Science | GPA: {{X.XX / 4.00}}

* Relevant Coursework: Data Structures & Algorithms, OOP (Java/C++), Operating Systems, DBMS, Web Development, Software Engineering.

TECHNICAL SKILLS

Languages:	C++, Java, Python, Dart, JavaScript (ES6+), TypeScript, C, SQL, HTML5, CSS3
Web & Frameworks:	React.js, Flutter, Node.js, Express, Tailwind CSS, RESTful APIs
Developer Tools:	Git, GitHub, Linux / Unix CLI, Android Studio, VS Code, CMake, Postman, CI/CD (GitHub Actions)
Core Competencies:	OOP, Data Structures, Algorithms, GLSL Shaders, Unit & Integration Testing, State Management

FEATURED PROJECTS

Epilogue -- Cross-Platform Reading Companion & Studio **[Flutter, Dart, GLSL Shaders, Linux/Android/Windows]** github.com/EtherealInsanity/Epilogue

* Architected an open-source, distraction-free reading companion & EPUB engine supporting 500+ chapter epics on Android, Linux, and Windows.
* Engineered a paper-pure typography engine integrated with custom GLSL shaders for GPU-accelerated effects and progression telemetry.
* Maintained high software reliability with 31/31 passing unit tests, automated GitHub Actions CI/CD workflows, and 0 static analyzer issues.
* Implemented modular chapter parsing and local caching to deliver sub-second chapter navigation and seamless offline persistence.

Full-Stack Web Application **[React, Node.js, Express, REST APIs, Tailwind CSS]** {{Month Year}}

* Developed a responsive web application utilizing React functional components, hooks, and client-side routing for single-page navigation.
* Constructed modular REST API endpoints in Node.js/Express with schema validation, structured error handling, and database queries.
* Optimized frontend bundle size and component rendering cycles to achieve rapid First Contentful Paint and fluid mobile responsiveness.

Systems Programming & Algorithms Utility **[C++, Java, OOP, Data Structures]** {{Month Year}}

* Engineered an optimized command-line utility implementing custom graph and tree traversal algorithms with optimal time and space bounds.
* Applied strict OOP design patterns (Factory, Observer) to structure modular class hierarchies; validated zero memory leaks with Valgrind.
* Authored automated test suites in Java/JUnit covering edge cases, verifying sorting, traversal, and boundary constraints.

Automated Data Pipeline & Web Scraper **[Python, BeautifulSoup, Pandas, Automation]** {{Month Year}}

* Built an automated Python scraping engine to ingest, clean, and structure unstructured web content into normalized JSON/CSV stores.
* Implemented resilient network logic with exponential backoff and rate-limiting, reducing manual data collection time by over 80%.

EXPERIENCE & LEADERSHIP

Undergraduate Teaching Assistant / Peer Tutor -- Computer Science {{University Name}} * {{Month Year}} - Present

* Mentored 40+ undergraduate students in foundational C++, Java, and algorithmic problem solving during weekly lab sessions.
* Assisted students in isolating runtime bugs, understanding memory models, and adopting disciplined testing practices.
* Evaluated programming assignments, offering detailed constructive feedback on algorithmic efficiency and clean code standards.

Developer Club Member & Open Source Contributor {{Club Name}} * {{Month Year}} - Present

* Collaborated with student developers in weekly agile sprints to build collaborative tools and hackathon prototypes.
* Contributed bug fixes and documentation improvements to community repositories on GitHub.

CERTIFICATIONS & HONORS

* Dean's Honor List / Academic Merit Scholarship: Recognized for academic excellence in Computer Science ({{Semester / Year}}).
* Hackathon Participant / Finalist: Built a functional full-stack prototype within 36 hours at {{Hackathon Name}} ({{Year}}).
* Technical Certification: {{e.g. HackerRank Problem Solving (Intermediate) / Meta Frontend Certificate}} ({{Year}}).
